                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                     The present sequence encodes a protein that is specific for pathogenic strains of Neisseria. The polymucleotides, polypeptides, or their antigenic fragments, are used in vaccines to treat or protect against Neisseria infections, particularly by N. meningitidis. The polymucleotide sequence is also used for recombinant production of the polymeptide and to produce attenuated Neisseria strains that overexpress it, or express
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cadada certric cecrea carriarie arricerecerierar creritie de certara de 169

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of Neisseria meningitidis and N. gonorrhoeae which encode antigenic proteins (see AAY38499-Y38944). The antigenic proteins, their fragments, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           229

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠે
                                                                   ઠ
                                                                                                                                                                                                                                                                                   The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. AAA81453 to AAA82414 represent specifically claimed Neisseriam meningitidis genomic DNA sequences. AAA81260 to AAA81263 and AAA81265 represent Neisseria DNA sequences and their corresponding proteins; AAA81264 to AAA81259 and AAA81264 to AAA81254 to AAA81259 and AAA81264 to AAA81252 represent PCR primers used in the isolation of Neisseriam meningitidis Mons polymucleotide ORF sequences, which are all used in the exemplification of the present invention. The nucleic acid used in the exemplification of the present invention. The nucleic acid used in the exemplification of the present invention. The nucleic acid the manufacture of a composition of medicament (or in the manufacture of a medicament) for treating. The manufacture of a composition of a medicament or in the manufacture of a medicament or in the manufacture of a medicament or vising infection due to Neisserial bacteria. For example, some of the identified proteins components of vaccines against Meningococcus B; againet all serotypes; and/or against all pathogenic Neisseriae. Identification of sequences from the bacterium will also facilitate production of biological probes, particularly organism-specific probes. Attempts to make efficacious Meningococcus B vaccines have also been tried but none have successfully overcome antigent variability. The provision of further, complete sequences may provide an opportunity to identify secreted or surface exposed proteins that may be presenued targets for the immune system and which are not that may be presenued targets for the immune system and entered to the provision of the may or the provision of the may organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 3125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3185

```
The present invention describes the full length genome of Neisseria

meningitidis B (NMB). The sequences in AAF21544 and AAF21607 to AAF21613

crepresent fragments of the NMB genomic sequence, as the sequence was too

long to go in a record on its own it was split into 8 sequences which

coverlap each other at the beginning and end of each sequence by 49980 bp

coverlap each other at the beginning and end of each sequence by 49980 bp

coverlap each other at the beginning of the beginning of the last 49980 bp of AAF21541 is repeated at the beginning of AAF21607, the last 49980 bp of AAF21507 are repeated at the beginning of AAF21607, and so on). AAF21545 to AAF21589 to AAF21608 represent proteins

consider the last 49980 bp of AAF21590 to AAF2160 represent proteins

consider the last 49980 bp of AAF21590 to AAF2160 represent proteins

consider the last 49980 bp of AAF21607 are repeated at the beginning of AAF21609, and so AAF21608 represent proteins

consider the last 49980 bp of AAF21607 are repeated in remonstance and gene therapy. Neisserial activity, and can be used in vaccines and gene therapy. Neisserial nucleic acids, proteins

conflor antibodies which binds to the proteins can be used in compositions

conflor antibodies raised to Neisserial bacteria or as a diagnostic reagent for detecting the presence of Neisserial bacteria or conjuter storage medium or computer databases can be used in a search to computer storage medium or computer databases can be used in a search to dentify open reading frames (ORFS) or coding sequences within the NMB genome. The DNA sequences provide further opportunities to find antigenic or immunogenic proteins which are more effective in vaccines than the constant proteins currently used

couter membrane proteins currently used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    648

The present invention describes the full length genome of Neisseria
meningitidis B (NMB). The sequences in AAF21544 and AAF21607 to AAF21613
represent fragments of the NMB genomic sequence, as the sequence was too
long to go in a record on its own it was split into 8 sequences which
clong to go in a record on its own it was split into 8 sequence by 49980 bp
(i.e. the last 49980 bp of AAF21541 is repeated at the beginning of
(i.e. the last 49980 bp of AAF21507 are repeated at the beginning of
AAF21607, the last 49980 bp of AAF21607 are repeated at the beginning of
AAF21609, and so on). AAF21545 to AAF21589 to AAF21606 represent pcR
CC AAF21609, and so on). AAF21545 to AAF21589 to AAF2160 represent pcR
CC AAF21609, and so on). AAF2164 is resembled to AAF2160 represent pcR
CC AAF21609, and so on). AAF2164 is resembled to AAF21600 represent pcR
CC AAF21609, and so on). AAF2164 is composition.
CC AAF21609 and so on). AAF2164 is composition of the proteins antibacterial activity, and can
CC AAF21609 and so on on one the ready. Noisserial bacteria or as a
CC diagnostic reagent for detecting the presence of Noisserial bacteria or
CC diagnostic reagent for detecting the presence of Noisserial bacteria or
CC diagnostic reagent for detecting the presence of Noisserial bacteria or
CC diagnostic reading frames (ORFs) or coding sequences within the NMB
CHOOME. The DNA sequences provide further opportunities to find antigenic
CC outer membrane proteins which are more effective in vaccines than the

                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins and antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABZ37706-ABZ42016 represent nucleic acid molecules of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cedadacerriececreacarriaridarrecreccercirarcrecretriececerrarade

                                                          Nucleotide sequences AAZ11972-Z12358 represent open reading frames (ORFs) of Neisseria meningitidis and N. gonorrhoeae which encode antigenic proteins (see AAY38499-Y38944). The antigenic proteins, their fragments, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         648
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         708

The polynucleotide sequence is also used for recombinant production of the polynucleotide sequence attenuated Neisseria strains that overexpress it, or express it in a non-toxic mutant form.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleotide sequences AAZ11972-Z12358 represent open reading frames (ORFs) of Neisseria meningitidis and N. gonorrhoeae which encode antigenic proteins (see AAY38499-Y38944). The antigenic proteins, their fragments, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    768

                                                                                                                                                                 The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are cources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polymorphides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that the carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and each better the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The carry proteins, vectors containing the genes and Ab are also useful ctherapeutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens encoded toxins or antibiotics) and as comparating the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. C. luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     65180 TGGGTGTGGTACTCGCTGCCGGAGGGTATCCTGCTGATTATCACAAAGGGGATATCATTC 65239

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/demplification of the genes. Antibodies (Ab) raised against the polymorphisms are used for detection/demtification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that modulate, regulate, induce or inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. Luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The genes, proteins, vectors containing the genes and Ab are also useful are sensitive to P. luminescens containing the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. Luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens genes
                                                                                                                                                                                                  Antibacterial, fungicide, insecticide, polymorphism, genetic analysis, detection, food, gene expression; plant, animal, microorganism; toxin; antibiotic, biopesticide, virulence factor; disease model; plague;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Genomic sequence of Photorhabdus luminescens and encoded polypeptides, useful e.g. as therapeutic antimicrobials and agricultural pesticides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for disgnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents DNA encoding an A. baumannii

The H. influenzae sequence has been updated by R. Fleischmann. New database matches have been assigned, product names have been improved, and a number of frame shifts have been corrected. We incorporated their annotation into the /notes fields of the corresponding H. influenzae genes
